

Reason 13.1 Release Notes

December 15, 2024

Greetings, Reason enthusiasts! We're thrilled to present the latest update to your favorite music production software: Reason 13.1. This release is packed with new features and enhancements designed to elevate your creative experience, many of which are due to your suggestions. Let's dive into what's new:

New Devices

- **Note Tool:** Take full command of your MIDI performance with this utility Player. Whether you're fine-tuning a melody or crafting intricate rhythms, the Note Tool offers precision and control to bring your musical ideas to life.

- **Random Tool:** Inject a dose of unpredictability into your compositions with this Player device. Perfect for adding unexpected variations and keeping your music fresh and exciting.

Device Updates

- **Ripley:**
 - Resolved an issue where Ripley could sound different at the beginning of a song export under certain conditions. Now, your exports will sound just as you intended.
- **Gain Tool:**
 - Enhanced metering for more accurate visual feedback, ensuring you have precise control over your audio levels.
- **Sidechain Tool:**
 - Sidechain Input Gain now displays dB values, providing clearer insight into your settings.
 - The default setting for Sidechain Input Gain is now 0dB when reset, offering a consistent starting point for your sidechain configurations.

New Features

- **Custom Tags:** Organize your sounds and devices like never before. Create custom tags in both the Browser and Device Palette, categorize your content, and access your favorite tools with ease.
- **Enhanced Browser Functionality:**
 - Filter by container types such as Folder, Rack Extension, ReFill, and Sound Pack, making it easier to locate exactly what you're looking for.
 - Switch Browse Focus to a new device without closing the Browser, streamlining your workflow.
 - A new Info Area in the Browser provides additional details for selected items, giving you more context at a glance.

• Sequencer Improvements:

- MIDI notes will now preview when moving and selecting notes with Arrow Keys if the "Trigger notes while editing" setting is enabled in the Preferences, allowing for more intuitive editing.
- Introducing "Split Clip at Song Position," a new feature available in the context menu for clips (shortcut: alt/opt+X), enabling quicker editing.
- "Chop Clips to..." and "Chop Notes to..." are new features available in the context menu for clips and notes, allowing you to quickly divide events into smaller parts for detailed editing.

Chop Clips to... feature

Splits a selected clip into equal sections, making it easier to rearrange or manipulate individual segments.

Chop Notes to... feature

Divides selected MIDI notes into evenly spaced segments, useful for quick rhythmic edits or variations.

General Enhancements

- **Device Addition:** New context-sensitive "+" buttons allow for quickly adding devices or patches to the Rack above or below the selected device, making it easier to expand your setup.
- **Localization:** Additional translations have been added for Japanese, German, and French, making Reason more accessible to users worldwide.

Browser and Device Palette Improvements

- Improved search functionality in non-indexed locations ensures you can find your files more efficiently.
- Double-clicking to select text in the Device Palette and Browser now works seamlessly, enhancing usability.
- Better handling of duplicate ReFills, with duplicates noted in the new Info Area, helps keep your library organized.

We hope these updates inspire your creativity and enhance your music production experience. Your input helps shape Reason! Let us know what you think at support@reasonstudios.com—your feedback fuels future updates. Happy creating with Reason 13.1!

Explanation of improvements

For Reason Studios' latest update, **Reason 13.1**, I aimed to align the release notes with the company's signature lighthearted and engaging tone. The language is more relatable, making the updates feel less like a list of technical changes and more like an invitation to explore new creative tools.

To improve clarity, I included visuals where they provide the most value—especially for new devices and features that may be difficult to conceptualize through text alone. The goal was to enhance comprehension without overwhelming users with excessive imagery. Determining which features warrant visuals is subjective, but I prioritized those that introduce entirely new concepts.

Additionally, I reinforced the connection between Reason Studios and its user community by explicitly acknowledging that many of these updates were driven by user feedback. This highlights Reason's commitment to listening and evolving based on real-world usage. Embedded videos further enhance engagement by allowing users to see these changes in action.

Finally, I structured the closing statement as an open invitation for further feedback. By encouraging users to share their experiences with Reason 13.1, we create a continuous feedback loop that helps refine future updates.
